

## **Fork Positioner for Forklift**

Fork Positioner for Forklift - A fork positioner is actually an apparatus made out of top quality materials meant to be able to endure the most demanding operations and work environments. This piece of equipment can enable the one driving to work the blades hydraulically without leaving the seat. Side shifting units have the extra ability to laterally position the entire load or the arms so as to facilitate more precise lifting and placement in a faster and more efficient manner.

The blade pocket is quite unique and enables the individual operating it to be able to safely sway the blades into position without any worry of damaging the positioning cylinders. This can allow the operator the choice to be able to execute independent or simultaneous fork movement, depending on the job requirement. For most lift trucks with non-OEM carriages, complete carriages are necessary. Standard OEM carriages can be converted into fork positioners on available units.
